# List in HTML

# Overview

Introduction to List

Understanding list types

Modernizing lists

# Introduction to List

- An ordered list is a list of items that are numbered or lettered in sequence.

- In HTML, there are two types of lists that can be created: ordered lists and unordered lists.

- In HTML, an ordered list is created using the <ol> element, and each item in the list is represented by the <li> element. Here's an example:

# Types of List

- Formatting elements in HTML are used to apply visual styling or formatting to content on a web page.

  - These elements allow web developers to control the appearance of text and other content, and can be used to enhance the visual appeal and readability of a web page.
