Using HTML Forms

Understanding Form Components

Using Data Types for input

Selecting Options

Applying styles to form elements

Using Forms

- HTML forms are a crucial component of many web pages, allowing users to submit data to web servers for processing.
- Forms typically contain input fields, such as text boxes, radio buttons, checkboxes, and drop-down menus, along with a submit button that users can click to submit their data.

HTML presents server data to users.

HTML Forms allow users to provide data to the server.

Password

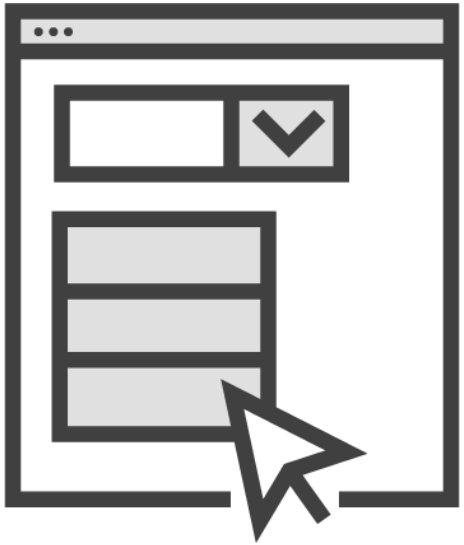
Using Data Types for Input

Additional Input Types

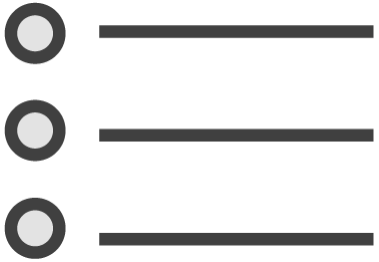
Email	URL	Telephone
Number	Date	Time

Selecting Options

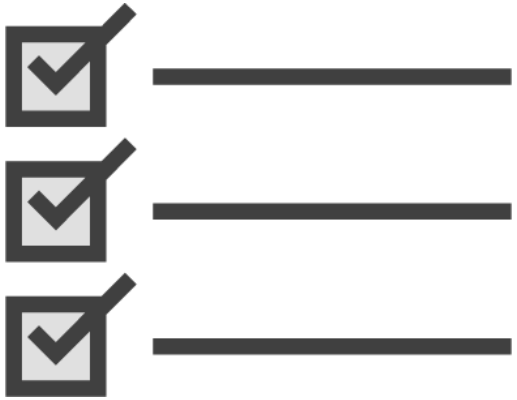
Selection Inputs



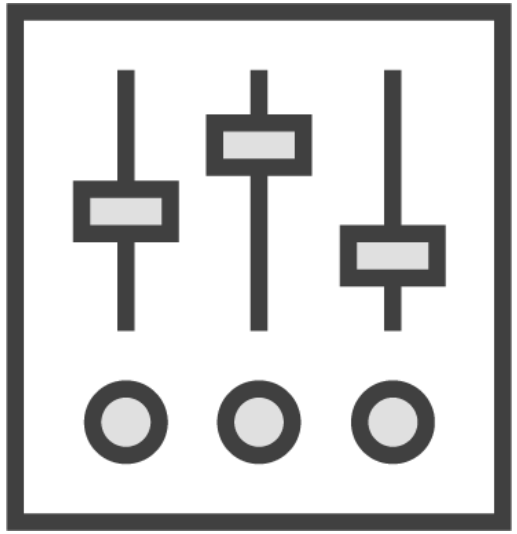
Select (List)



Radio Buttons



Check box



Range

Using Fieldset to Organize Your Inputs

Your name:
Your email:
Your phone: Cell Work Home
Ok to contact me: by phone by email

Basic Form

Contact Information
Your name:
Your email:
Your phone: Cell Work Home
Ok to contact me: by phone by email

Form with Fieldset

Label

Associates content, usually text or icons, with a specific input.

```
<label for="firstName">First Name:</label>
   <input type="text" id="firstName" />
```

Labels

Explicit reference by id

```
<label>First Name:
    <input type="text" id="firstName" />
</label>
```

Labels

Implicit reference by enclosing

Tab Order

Default is document order

Use tab Index attribute to specify

Specify zero moves to the end

Applying Styles

Input

Select

Text Area

FieldSet/Legend

Label

Button

Apply Styles to Specific Types

styles.css

```
input[type="email"]{
    background-color:purple;
    color:white;
}
```

Your email: matt@bethanyspies.com

Your phone: 555-555-1212

Apply Styles to Multiple Types

styles.css

```
input[type="email"], select{
    background-color:purple;
    color:white;
}
```
