# Overview

Introduction to Style Element

Inline Style

Using Embedded Style

Using CSS

# Introduction to Style Element

- The <style> element in HTML is used to define the styles and formatting for a web page using CSS (Cascading Style Sheets).

- The <style> element is placed within the <head> section of an HTML document and is used to define a set of rules for how various elements on the page should be styled.

# In-Line Style

```
Our cups are labeled with
   <span style="color:black">Warning: Coffee is
hot!</span> to help keep you safe.
```

# Styling Text

Our cups are labeled with Warning: Coffee is hot! to help keep you safe.

# Embedded Style

```
<style>
    span.important {
        color:red;
    }
</style>
```

# Styling Text

Our cups are labeled with Warning: Coffee is hot! to help keep you safe.

# CSS

# Formatting Elements

Holdovers from early days for basic formatting (bold & italics e.g.)

```
Our cups are labeled with
   <span class="important">Warning: Coffee is hot!</span>
to help keep you safe.
```

# Styling Text

Our cups are labeled with Warning: Coffee is hot! to help keep you safe.
