Overview

Hyperlinks

Different types of links

Hyperlinks using <a></a>

- In HTML, hyperlinks are created using the <a> (anchor) tag. They allow users to navigate from one page to another or to specific parts of the same page. Here's a basic explanation and examples:

```
<a href="URL">Link Text</a>
```

- href: Specifies the URL or the location the link points to.
  - It can be: An absolute URL (e.g., https://example.com)
  - A relative URL (e.g., page.html)
  - An email link (e.g., mailto:someone@example.com)
  - A tel link (e.g., tel:+123456789)Link Text: The clickable text visible to the user.

- Link Text: The clickable text visible to the user.

Examples

1. Basic Link:

```
<a href="https://www.google.com">Visit Google</a>
```

2. Open Link in a New Tab:

```
<a href="https://www.google.com" target="_blank">Open Google in a new tab</a>
```

3. Email Link:

```
<a href="mailto:someone@example.com">Send Email</a>
```

4. Phone Number Link:

```
<a href="tel:+123456789">Call Us</a>
```

5. Relative Link: Link:

```
<a href="about.html">About Us</a>
```

- This works for pages within the same website.

6. Link to a Specific Part of the Same Page (Anchor):

```
<!-- Create a section with an ID -->
<h2 id="section1">Section 1</h2>
<a href="#section1">Go to Section 1</a>
```

7. Downloadable Link:

```
<a href="document.pdf" download>Download PDF</a>
```

- download: Prompts the browser to download the file instead of opening it.
